Threat Hunt | Renaissance Spider

Financially motivated eCrime threat actor based in the Russian Federation

Type: ALERT • Source: SOCByte • Created At: May 20, 2026, 01:13 AM

Analysis Summary

On May 19th at 12am, Cythority's vSOC conducted a threat hunt focused on Renaissance Spider, covering activity within the past 30 days. Renaissance Spider is a financially motivated eCrime threat actor based in the Russian Federation. First observed in mid-2019, this group is notorious for its use of malspam campaigns and targeted intrusion operations. Beyond pure financial crime, they conduct influence and sabotage efforts using inauthentic hacktivist personas like "DaVinci Group" and "Fire Cells Group." Renaissance Spider primarily targets organizations in Ukraine and Eastern Europe, with some operations observed in Latin America. Their victims span various industries, including government agencies and critical infrastructure sectors. What sets Renaissance Spider apart from traditional ransomware groups is their willingness to cross the line from digital extortion into real-world intimidation. To force non-compliant victims into paying hefty ransoms, they have been known to leverage Telegram-based networks to coordinate physical attacks, arson, and even kidnapping against targets or associated individuals.

During this hunt, a total of 12,490 Indicators of Compromise (IOCs) were identified, including domains, URLs, IP addresses, email addresses, filenames, and file hash values. These indicators were aggregated from CrowdStrike, internal telemetry, and additional intelligence sources referenced in this report.

All identified IOCs were enriched using OSINT and threat intelligence platforms to validate their reputation. Analysis confirmed that the indicators are associated with malicious activity. A CQL Advanced Event Search was conducted across the environment to identify any evidence of activity related to these indicators within the last 30 days. No matches or suspicious activity were observed, confirming no current or historical presence within the environment. As a preventative measure, the validated malicious IOCs have been added to the IOC Management Block List to mitigate potential future exposure. This proactive control strengthens

the security posture and reduces the attack surface. Based on the investigation and analysis performed, no impact to the environment from Renaissance Spider has been identified and no further action is required at this time.

Affected Product

- Email (Corporate/Enterprise Inboxes, Webmail platforms)
- Client Communication Platforms

Impact

- Phishing - T1566
- Spearphishing - T1566.002
- System Owner/User Discovery - T1033
- Data Manipulation - T1565

Indicators of Compromise (IOCs)

Remediation

- Deploy advanced email security solutions to filter malspam effectively.
- Monitor for signs of disinformation campaigns, especially in regions of heightened geopolitical tension.
- Enable multi-factor authentication (MFA) across all critical systems.

• User Awareness Campaigns: Train employees to recognize phishing attempts and follow cybersecurity best practices

• Block all verified IOCs
